SUMMARY

Unity Developer with almost 5 years of experience. Developed hits like [Ragdoll Ninja](#) and [Tear Them All](#) - both with 10M+ installs. Asset Store publisher - [see my assets](#). My main expertise and passion are building tools and systems that make teams faster, codebases cleaner, and products easier to scale. Looking to bring that to a bigger, more complex product.

EXPERIENCE

Vira Games, Unity Developer

02/2025 – Present

Working on mobile games and monetization strategies to maximize profits. Developing internal company tools.

- Fully integrated AI into my workflow (Cursor)
- Adopted Zenject and UniTask as architectural standards
- Developed for Amazon Fire TV and Fire Tablet platforms
- Worked with subscriptions, IAPs, A/B tests, and remote content distribution
- Created internal company tools and an environment for development and distribution
- Developed a UI navigation solution used across the whole company

Self-employed, Unity Developer/Asset Store Publisher

06/2023 – Present

As an independent tools developer, I have a few published assets on the Asset Store.

[SDFImage](#)

Proper UI Outlines and Shadows, doing what Unity can't out of the box. Generates SDF (Signed Distance Field) for any sprite, allowing to render crisp outlines and shadows for UI elements. Default Unity's outline looks awful. This asset fixes that, [see the demo](#)

- Jobs, HLSL/ShaderLab (both CPU and GPU SDF Generation support)
- Asset Import pipeline mastery (AssetPostprocessors, ScriptedImporters, custom artifact files, custom Search Providers)
- RenderTextures, blitting, other low-level graphics operations (To generate and render SDF)
- User support, asset got 300+ paid users, requiring documentation, support, and iterative releases. Worked with feedback, created documentation

[DebugPanel](#)

Ideal for cheats in mobile games. Allows defining Buttons, Dropdowns, Toggles, Groups, and other UI elements in code, displaying them in the UI for debugging purposes. Handles layout automatically

- Runtime UI Toolkit support (USS, UXML)

N-iX, Unity Developer

07/2024 – 12/2024

Worked on creating training experiences in VR.

- Developed VR projects in a proprietary Unity-based game engine for a VR world
- Created a Google Sheets/Google Drive-based asset management system for designers

Hyper Futura, Unity Developer

01/2021 – 06/2023

Developed Ragdoll Ninja ([Google Play](#), [App Store](#)) and Tear Them All ([Google Play](#), [App Store](#)) - both reaching 10M+ installs

- Developed a library that we used as a company standard and was responsible for the base project architecture.
- Created a roadmap for other programmers, mentored them, and helped with their projects
- Full-stack development for Android and iOS
- Scaled and maintained existing projects and led them through iterations
- Integrated third-party monetization and analytics services

Other games I made while working here: [Mine Fight](#), [Portal Jump](#), [Ocean Discoverer](#), [Mine Pioneer](#), [Voxel Digger](#)

Hook Games, Unity Developer

09/2020 – 02/2021

- Released Idle Digger on iOS and Android
- Continued developing an improved version independently after the project was shelved - [see demo](#)

TECHNOLOGIES

C# | Unity
Addressables, Zenject, Async/UniTask, uGUI, UIToolkit, IMGUI, DOTween, Cinemachine

Git | CI/CD
GitHub actions, GitLab pipelines, Verdaccio, Jenkins

Python, C++
At basic level

Services | SDK
AWS (s3), AppLovin MAX, IronSource, AppMetrica, GameAnalytics

IDE's
JetBrains Rider, Visual Studio/Code, Cursor (AI)

Tools
Profiler, Memory Profiler, Frame Debugger, Logcat

UNITY STACK

Optimization
Profiler, Memory Profiler, Frame debugger. Optimizing games for 1gb 8 years-old devices

CI/CD
Made pipelines in GitLab/GitHub for internal tools distribution, scoped registries server in Verdaccio

Editor extensions
Proficient in everything editor-related, created a bunch of tools. Reflections, Assets import pipeline, IMGUI/UIToolkit

Jobs | Burst
Runtime mesh deformation, signed distance field generation

Physics
Active Ragdolls, RayFire, Obi Rope, Obi Softbody

UI
Custom UI shaders, procedural UI mesh generation, UI tweening, optimization, UIToolkit

Rendering/Shaders
Understands rendering pipeline. Custom shaders, compute shaders, ShaderGraph, VFX Graph

VR
XR Interaction Toolkit, AutoHand, proprietary Unity-based VR engine

Animations
Layers, blending, Animation Rigging – IK

RESOURCES

[Website](#)
SDFImage landing page

[SDFImage](#)
Commercial tool in asset store

[DebugPanel](#)
Free tool in asset store

[YouTube](#)
I recorded tutorials there, once upon the time

[After AfterParty](#)
Game made with friends for the GMTK 2026 Game Jam in 4 days - first experience managing a small team.

[NextIteration](#)
Game made with a friend for GMTK 2025 Game Jam in 4 days

[unShattered](#)
Game concept developed during Game Design course

EDUCATION

Game Design, *Creative&Tech Online Institute Projector* 03/2024 – 06/2024 | Online
Final work was the game idea, documented and ready to present to the investors. Here is [presentation](#) for my project's pitch.

Psychology, *Ternopil State 'Ivan Pul'uj' Technical University* 09/2017 – 06/2020 | Ternopil, Ukraine

LANGUAGES

English
